

## CLIMATOLOGICAL DATA

7

## GEORGIA SECTION

G. W. MINDLING

VOL. XXXIX ATLANTA, GA., SEPTEMBER 1935

No. 9

## GENERAL SUMMARY

This was the coolest September since 1929 with mean temperatures about  $1^{\circ}$  below normal at most stations. Except in a few places the lowest temperatures came on the 25th or 30th. No unusual extremes occurred. Average daily maximum temperatures ranged from about  $81^{\circ}$  in the extreme northeast to  $87^{\circ}$  in the southern interior and average daily minimum temperatures from about  $54^{\circ}$  to  $69^{\circ}$ .

Rainfall was remarkably light in the north, but unusually heavy near the coast. From about Marietta northwestward, northward, and northeastward the total amount was less than an inch. About two thirds of the stations had less than normal rainfall, but from about Albany to Augusta the amounts increased rapidly toward the coast with nearly 12 inches as far inland as Glennville. Some remarkably heavy rains, 5 inches or more, occurred as the well known Florida Keys hurricane passed over the southern section on the 4th and 5th, although highly destructive winds at that time were lacking. However, the winds did cause extensive damage to crops in the fields and some minor damage to other property. Much cotton was blown off the stalks and most of the remaining open cotton in southern counties was badly spoiled by these rains. Continued spoilage of cotton and peanuts resulted over a great area in south Georgia through about half the month.

Severe local storms not believed to be of tornadic character caused damage to a few buildings at McRae and Milledgeville on the 23d, and one young man was killed by lightning at Milledgeville. In Augusta on the 20th strong winds brought down several large trees and some of the primary power and telephone lines.

## TEMPERATURE

The monthly mean temperature from the records of 55 stations was  $74.6^{\circ}$ , or  $1.0^{\circ}$  below normal. The highest monthly mean temperature was  $78.2^{\circ}$  at Waycross, and the lowest was  $67.8^{\circ}$  at Blairsville. The highest temperature recorded was  $98^{\circ}$  at Rome on the 22d. The lowest was  $39^{\circ}$  at Tallapoosa on the 30th.

## PRECIPITATION

The average precipitation for the month, 86 stations reporting, was 3.64 inches, or 0.03 inch below normal. The greatest amount was 18.40 inches at Brunswick, and the least was 0.22 inch at Hiawassee. The average number of days with 0.01 inch or more of precipitation was 8. The greatest amount in any 24 hours was 6.08 inches at Brunswick on the 18th..

## PRESSURE, WIND, HUMIDITY, AND SUNSHINE DATA

Stations	Atmospheric pressure (reduced to sea level)					Wind			Relative humidity			Percentage of sun-shine

## MISCELLANEOUS PHENOMENA

The prevailing direction of the wind was from the northeast with an average velocity of 7.2 miles per hour. The maximum velocity (for 5 minutes) was 49 miles per hour from the south at Savannah on the 5th.

The average number of clear days was 15, partly cloudy 7, and cloudy 8.

The percentage of possible sunshine as determined from the records of 4 Weather Bureau stations was 66 (normal 62).

## RAINFALL DATA FOR HIWASSEE RIVER DRAINAGE BASIN, NORTH GEORGIA

(These stations are maintained by the Tennessee Valley Authority. Complete daily records are available at Weather Bureau office, Atlanta, Ga.)

**Daily Precipitation for September 1935**

Except as otherwise indicated observations are generally made late in the afternoon, near sunset, and precipitation recorded is for 24 hours ending at the time of observation.

Precipitation included in the next following measurement  
is precipitation measured in the morning; amount then recorded is for the preceding 24 hours.

Separate dates of falls not recorded. T. Trace, or less than 0.01 inch.  
\*\*\* Regular Weather Bureau station; precipitation is for the 24-hour period, midnight to midnight. <sup>††Rainfall at Experiment measured at 8 a.m., but entered as of the previous day.</sup>  
<sup>& Rainfall partly estimated.</sup>

\*\* Regular Weather Bureau station; precipitation is for the 24-hour period, midnight to midnight. § Rainfall partly estimated.
